Abstract

This document provides a complete example of the `journalpaper` document class. It demonstrates every feature defined by the class, including the title block, abstract, keywords, section numbering, figure and table captions, colored cross-references, and citation commands.

Keywords: LaTeX; academic writing; journal paper; document class

1. Introduction

This is a complete example demonstrating every feature of the `journalpaper` document class.

The class preserves the standard structure of an academic manuscript. Authors can use familiar commands such as `\title`, `\author`, `\date`, and `\maketitle`.

The class also provides predefined styles for sections, figures, tables, equations, citations, and cross-references.

2. Equation

Consider the following quadratic function:

$$y = ax^2 + bx + c. \tag{1}$$

For $a = 1$, $b = 2$, and $c = 1$, Eq. (1) becomes

$$y = x^2 + 2x + 1. \tag{2}$$

A third equation is added for range and multiple tests:

$$y = (x + 1)^2. \tag{3}$$

Equation Eq. (1) is the general form, and Eq. (2) is a special case.
The class also supports Eq. (3).
Eq. (1) is the most general form.
See Eqs. (1) and (2) for the general and specific cases.
Equations Eqs. (1)–(3) cover the full range.
Eqs. (1)–(3) cover the full range.

3. Table

Table 1 gives several example values calculated from (2).

A second table is added for multiple and range tests.
A third table is added for range tests.
Table 1 lists the values.
Tables 1 and 2 give complementary data.

Table 1. Example values of the quadratic function.

a	b	c	x	y
1.0	2.0	1.0	−2	1
1.0	2.0	1.0	−1	0
1.0	2.0	1.0	0	1
1.0	2.0	1.0	1	4
1.0	2.0	1.0	2	9

Table 2. A second example table.

Item	Value
A	1
B	2

Tables 1–3 cover all tables.
Tables 1–3 cover all tables.

4. Figure

Figure 1 demonstrates the standard `figure` environment.
A second figure is added for multiple and range tests.
A third figure is added for range tests.
Figure 1 shows a placeholder.
Figures 1 and 2 show two placeholders.
Figures 1–3 show three placeholders.
Figures 1–3 show three placeholders.

5. Section Formatting

The section numbering is automatically formatted by the class.

5.1. Subsection

This is a subsection. Its number appears in the form “5.1.”.

5.1.1. Subsubsection

This is a subsubsection. Its number appears in the form “5.1.1.”.

6. Citation

LaTeX is widely used for scientific and technical document preparation (Lamport, 1994).

Table 3. A third example table.

Item	Value
C	3
D	4

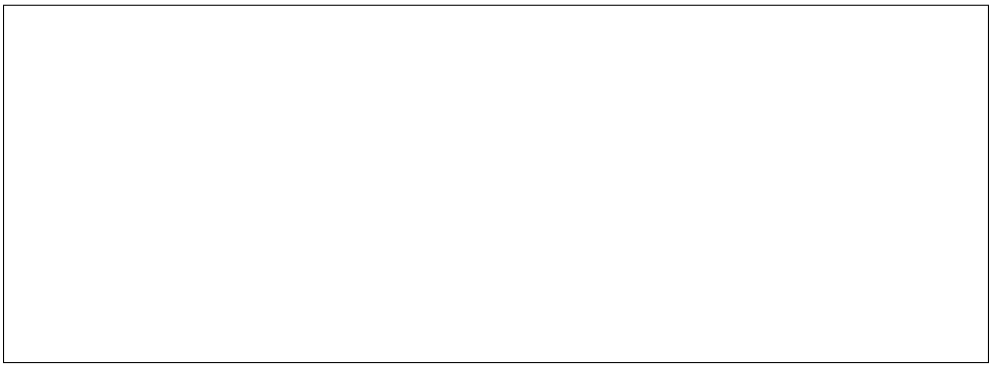

Figure 1. A placeholder figure.

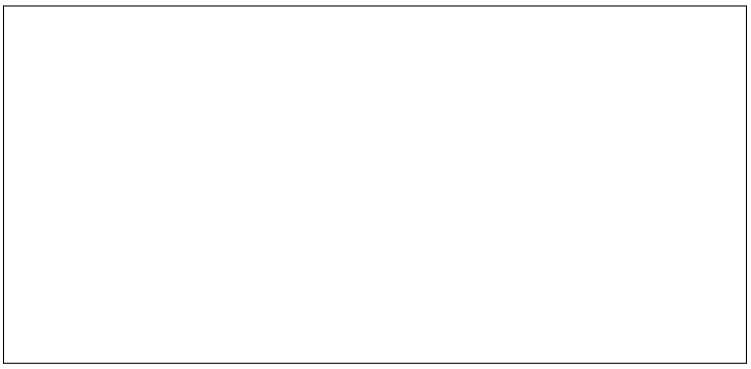

Figure 2. A second placeholder figure.

Figure 3. A third placeholder figure.

7. Conclusion

This example demonstrates every feature of the `journalpaper` document class: the title block, abstract, keywords, section numbering, figure and table captions, colored cross-references for single, multiple, and ranged figures, tables, and equations, as well as citations.
